

# Studio

- Addressed an issue with the welcome slide, where if a video slide was set as the welcome slide the audio was heard by staffers when the welcome slide wasn't selected.
- Addressed an issue within the media editor where the media file wasn't generating if blank media was appended to either the beginning or end of the media version.

- Addressed an issue with the Lobby registration page template where the social media widgets were not displaying.
- Updated the Report Builder and Attendance 2.0 reports to ensure the attendance and duration counts were synced.
- Updated the Attendance 2.0 drilldown report to display all attended viewers regardless of their registration status.

- Updated the toolbar navigation setup to allow for an item to be added as display only and not require an action be added.
- Addressed an issue within the "Reporting Dashboard of Metrics in VE where when selecting a report from the "My Reports" section an error was being returned.
- Addressed an issue with the presentation lists within the Theater where the "Starting Soon" display did not match up with the start time of the webcast.
- Addressed an issue with the Scribe connector where when creating a user, it was not returning the email address properly.
- Addressed an issue where when creating a sponsor space staffer, they were being defaulted to hidden regardless of the option chosen at initial creation.

# Cross Platform

- Certified Chrome 96 across the platform.
- Certified Firefox 95 across the platform.
- Updated the “External Registration Activity” API to return show survey results in the original order of the survey. Previously, they were being returned in alphabetical order.
- Addressed a display issue with Korean letters not displaying properly on a certificate.
- Addressed an issue with not being able to add/update presentation abstracts via the API.
- Addressed an issue with quotation marks being passed at the end of a data string via the API causing the data to be placed in incorrect columns in stock reports.
- Updated the Report Writer outputs to include a parameter for xlsx format.
- Removed the custom filter option from the “user report” parameters within the data portal report builder.
